

National Fiber Network Reliability Report (January-March, 2018)

**Division of Telecom and Space
Department of IT and Telecom**

Executive Summary

In order to check and monitor the national network reliability, the DITT/MoIC has prepared the following report.

The data is collected from the stakeholders (BPC, TICL, BT) and 20 Dzongkhag ICTOs on a monthly basis and the report is prepared on a quarterly basis. This is the third report of the financial year 2017-2018.

DITT has been collecting National fiber reports from the two ISPs (BT and TICL), from 20 dzongkhags and BPC as well.

Introduction

Department of Information Technology and Telecom (DITT) under MoIC (Ministry of Information and Communications) has implemented National Broadband Master Plan Implementation Project (NBMP) to establish fiber optic backbone network throughout the country. Under the said project, 18 Dzongkhags have been connected with OPGW cables and remaining two Dzongkhags and 201 Gewogs have been connected with ADSS cables.

DITT is the sole owner of the National Fiber network. DITT leases the fibers to Telecom operators and Internet Service Providers for free of cost in order to ensure level playing field for operators and to help improve competition at the service level. In addition, the fibers is also used by the department to establish connectivity to Community Centers.

BPC manages the Operation and Maintenance of the National Fiber Network. As of now, there are no fiber monitoring system to conduct online detection and rectification of fiber outages. The fiber breakages are manually detected and rectified. According to the agreement signed between DITT and BPC on September 30th, 2011, BPC is mandated to maintain 98% point to point availability of fibers, except where disruptions are caused by force majeure conditions. Therefore, in order to check the consistency and availability of fibers, a monthly fiber reliability reports are collected from the stakeholders (BT, TICL, BPC) and 20 Dzongkhags. Data collected for the months January to March, 2018 are reported below.

Objective of the study

To study the National Fiber Network Reliability in Bhutan

Methodology

A dashboard was prepared for maintaining the Fiber network reliability based on different parameters listed as follows:

- Fault Time (Time at which the fault occurred/detected)
- Fault Resolution (Time at which the fault was rectified)
- Outage Time (Duration of outage)
- Availability (Availability= ((Service Uptime/Total time)*100), Service Uptime=Total Time-Outage Time, Total Time=24*No. Of days in a month)
- Fault Type (Fiber breakages, Force Majeure, Equipment Faults, Schedule Maintenance)
- Customer Impact (No. of Dzongkhag affected, No. of sites affected)

This dashboard is shared with the relevant stakeholders (BT, BPC and TICL) and Dzongkhag ICTOs who uses the Fiber network. The stakeholders and ICTOs were given instructions on the usage of the dashboard via email, letter and telephone after which they were asked to maintain records on above parameters on a monthly basis. This data collection is an ongoing process.

Based on inputs provided by the stakeholders and Dzongkhag ICT officers, data has been analysed and compiled in this Network Reliability report.

Key Findings

Based on the data submitted by the stakeholders and Dzongkhag ICTOs average availability for January-march, 2018 has been compiled in tables below.

- 1) Fiber Network Reliability report submitted by TICL

Months	Availability in percent
January	100
February	100
March	100

Average availability was 100%

- 2) Fiber Network Reliability report submitted by BT

Months	Availability in percent
January	99.82
February	99.815
March	97.81

Average availability was 99.1483%.

3) Fiber Network Reliability report submitted by BPC

Months	Availability in percent
October	100
November	100
December	100

Average availability was 100%

4) Fiber Network Reliability report submitted by Dzongkhag ICTOs

Dzongkhags	Availability for October month	Availability for November Month	Availability for December month	Average for three months	Remarks
Punakha	100	100	100	100	
Bumthang	100	100	100	100	
Chhukha	100	100	100	100	
Thimphu	100	100	100	100	
Tashigang	100	100	100	100	
Tashiyangtse	100	86.66	100	95.55	Fiber connectivity issue at Jamkhar CC for 96 hours on 12/2/2018.

Haa	100	100	100	100	
Dagana	100	100	100	100	
P/gatshel	100	100	100	100	
Samtse	100	100	100	100	
Trongsa	100	100	100	100	
Lhuntse	100	100	100	100	
Mongar	100	100	100	100	
Paro	100	100	100	100	
Tsirang	100	100	100	100	
Samdrup Jongkhar	100	100	100	100	
Wangdue phodrang	100	99.55	100	99.85	Fiber Break at Athang CC for 3 hours on 26/2/2018
Sarpang	100	100	100	100	
Zhemgang	100	100	100	100	
Gasa	100	100	100	100	

Conclusion

The above analysis was limited to the monthly network reliability reports submitted by the Telcos/ISPs, BPC and Dzongkhag ICTOs. From the reports collected for January to March, both the ISPs were able to maintain availability at 98%. Hence the average availability for the month of January to March is 99.5742% (average of two ISPs). From the report submitted by BPC, the availability was 100% for the month of January to March, 2018.

DITT has been informed that all the identified fiber breakages have been restored. From the report submitted by the Dzongkhag ICTOs, Trashigang Dzongkhag has the lowest percentage availability of fiber with average of 95.55% for the month of January till March 2018, as there was fiber connectivity issue at Jamkhar CC for 96 hours on 12/2/2018. The average availability for 20 dzongkhags for the month of January to March is 98.99565%.

Constraints

1. Still after repeated reminders, some of the Dzongkhag ICTOs are not able to share their reports on given date and time due to their own obligations. This has created delay while publishing the quarterly report for DITT.
2. While calculating the fiber availability, some of the fault types are mainly because of equipment faults such as switch and media converter faults. Such type of faults are not considered while calculating the fiber availability.
3. As per the agreement signed between BPC and DITT, BPC is supposed to maintain 98% availability for the National Fiber Network. However, based on the reports submitted by Telcos/ISPs and Dzongkhags, there are cases when the availability was less than 98% (Trashiyangtse Dzongkhag with 95.55%).
