

DzongkhaLinux is a Linux distribution that can be run directly from the CD(as a LIVE-CD) or can also be installed on the hard disk.

To use DzongkhaLinux as a LIVE-CD, just insert the CD into the CD ROM drive and restart the computer. The BIOS must be configured so that CD-ROM is your first boot device. To setup the BIOS, press the 'Delete' or 'F2' or 'F8' keys (This depends on the computer brand) when the computer boots. Once you are in the BIOS setup screen, Go to the menu named 'Boot' or 'Advanced BIOS Setup' (This too depends on the your computer brand) and set the 'First Boot Device' as CDRom. Once this is set, save your settings and exit the BIOS setup.

The default root password for DzongkhaLinux liveCD is bhutan.
